PROTECTING YOUR PRODUCTS

GENERAL INFORMATION

The primary purpose of stretch film is to tightly wrap around items or pallets, providing stability and protection. It can be manually applied or used with stretch-wrapping machines. When stretched, the film has elastic properties that allow it to cling tightly to itself, creating a secure and stable unit.

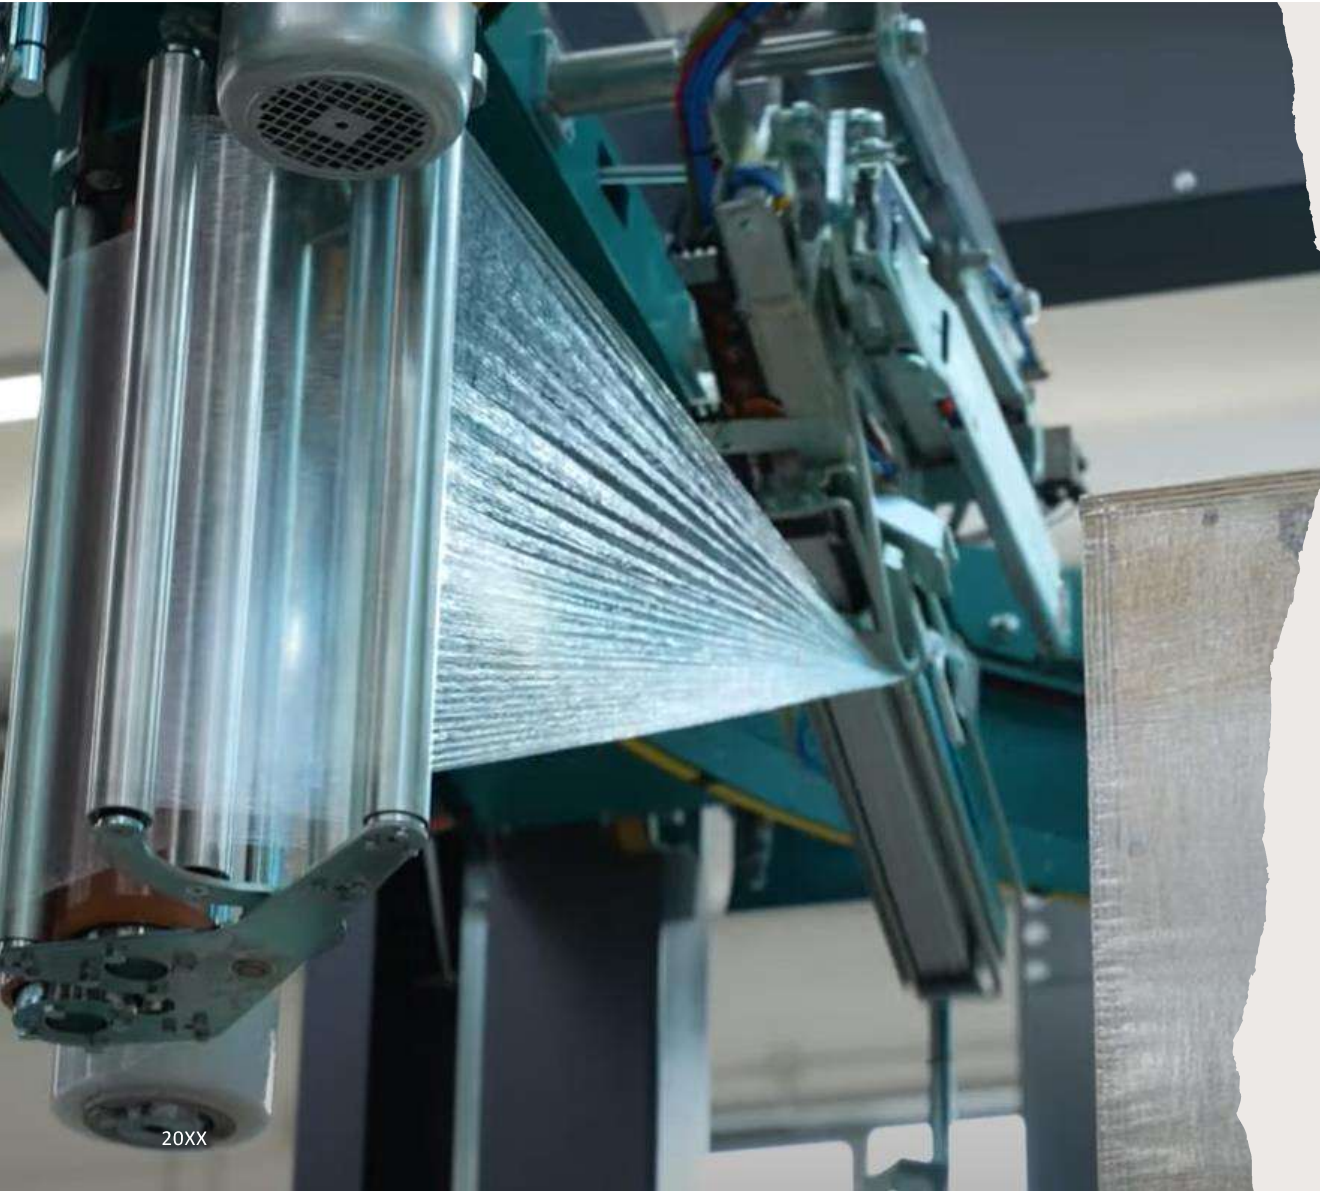

AREA OF APPLICATION

Stretch film is commonly used in industries such as manufacturing, logistics, warehousing, and retail. It is particularly useful for securing palletized loads, bundling products together, or protecting fragile or sensitive items during transit.

STRETCH FILM STANDARD PRODUCTS

Product Code	Product Type	Thickness (μ)	Pre- Stretching (%)	Width (mm)	Length (m)	Core Weight (Kg)	Total Roll Weight (Kg)
